

# RenameInstanceHandler

## Description

This [handler](#) renames the current instance by any text that can include variables.

---

## Action Class

```
com.dooris.bpm.actionhandler.RenameInstanceHandler
```

---

## Event Type

any type

## Action Name

any name

## Mandatory Fields

## Parameter

**instanceName = desired\_name\_\${variable}**

Variables are specified as \${variablename} (see [Example](#))

## A continuous ID for process instances

The [system variable \\${SYS.BUSINESS\\_ID}](#) generates a unique, continuous ID for every created process instance. The system variable can be used in the renameInstanceHandler. Thus, every created process instance is given a unique, continuous ID.
