

## Version and Packet

Before the CBA-Module can be installed, JBoss must be expanded through modules and standalone.xml. Directions may be taken from the Anleitung kann [following installation guide!](#)

The Module CBA - Configuration Based Application is always delivered in EAR-Format and must be copied into the index code

```
C:\tim\jboss<version>\standalone\deployments\
```

## Applying and tailoring configurations

In the next step, CBA must be outfitted with a basic configuration. The required configurations can be downloaded [here](#).

The file **cba.properties** must be located

```
C:\tim\jboss<version>\standalone\configuration\
```

and then configured to the appropriate system. For this, the following changes must be applied:

Value in cba.properties	Explanation	Value
<b>portal</b>	internal reference	TIM-Portal
<b>dau-tim</b>	login data for the TIM database	User, Password, Database
<b>tim_service.wsdl</b>	Contains the URL, over which TIM is to be communicated (must be accessible via HTTP)	Here, the port and host that are accessible via http are entered
<b>environment_type</b>	internal reference	D
<b>dau-sql-... (optional)</b>	Login details for a third party database to be used within a process	User, Password, Database

The file **ACM.properties** must be located under

```
C:\tim\jboss<version>\standalone\configuration\
```

and then configured to the appropriate system. For this, the following changes must be applied:

Value in ACM.properties	Explanation	Value
<b>dau-sql-acm</b>	Login data for the TIM database	User, Password, Database

## Tailoring the TIM configurations

### tim-cba.properties

In order for TIM to be able to communicate with (and use) CBA, two configuration files must be adapted. Within **tim-cba.properties**, the **cba-ws** parameter from the respective [server setting](#) must

be adjusted. By default, CBA and TIM run on the same server and the same port (8080). That said, in most cases the value can be set to <http://localhost:8080/cba-ws/SaaS TecWeb?wsdl>.

```
cba-ws=http://HOST:PORT/cba-ws/SaaS TecWeb?wsdl  
cba-servlet=/loom-portal/CbaServlet
```

## tim.properties

Additionally, the following entry must be pasted into the **tim.properties** and commented, if this has not already been done

```
form-provider=com.dooris.cba.providers.CbaFormProvider
```

Templates may be taken from the following [download site](#)

---

## Activation of Smartform Designers/ Architects

### 2. Access to the TIM Smartform Suite
