

Dashboard Installation

The dashboard is an analysis tool that presents live-data in tabular or graphic form.

Components

The dashboard is comprised of the following files

- dashboard.war
- dashboard.properties
- loom-dashboard-ejb.jar - as a connector to TIM

Installation

In order to install the dashboard, the **dashboard.war** file must be placed in TIM's deploy directory. 

```
C:\tim\jboss<version>\standalone\deployments\
```

The **dashboard.properties** file must be moved to the **\configuration** directory in the JBoss directory.

```
C:\tim\jboss<version>\standalone\configuration\
```

The **loom-dashboard-ejb.jar** file must, if necessary, be moved to the **\tim.ear** directory in the JBoss directory.

```
C:\tim\jboss<version>\standalone\deployments\tim.ear\
```

In order for the dashboard to be able to access to the current installment of TIM, the **dashboard.properties** has to be adjusted with an editor. In **Line 1**, the **wSDLHost** must be suited for TIM.

Example

The address of the TIM-client is: <http://meinefirmenserver:8383/loom-portal/>. The wSDLHost is then:

```
wSDLHost=http://127.0.0.1:8383/
```

Possible Analyses

The page for [Table Structure](#) provides information on which tables and columns can be used.
