AssignMultiUserHandler

Description

This action handler assigns a swimlane to multiple users. For this, a temporary group is created, which is automatically deleted at a later point. The group name consists of the e-mail addresses of the members so that the members who can work on the task are clearly identified. The username or e-mail addresses of the users must be defined in a variable (Parameter "users").

Action Class

```
com.dooris.bpm.actionhandler.AssignMultiUserHandler
```

Event Type

any

Action Name

any

Mandatory Fields

none

Parameter

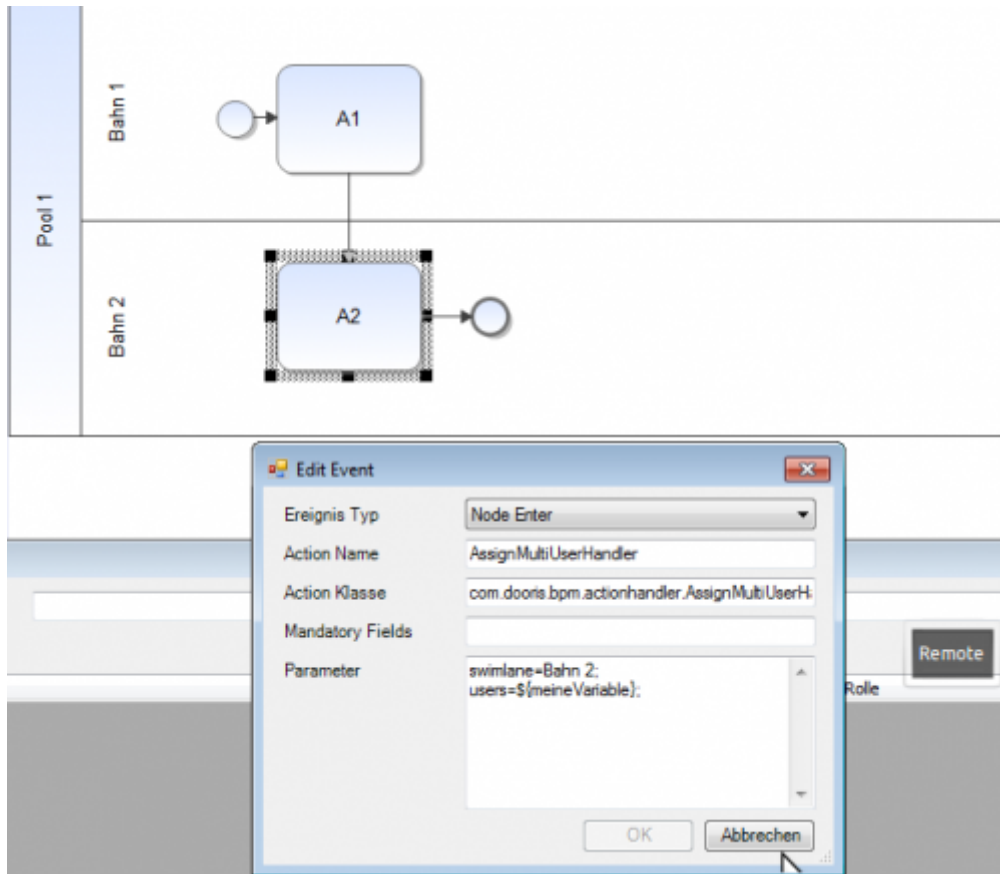

swimlane

Name of the swimlane being assigned

users

Name of the process variable in which the users are saved. Usernames or e-mail addresses may be used, but must be separated by a semicolon.
