HumanDecisionHandler

This [handler](#) automatically reaches to [XOR-Gateways](#) in which no [VariableDecisionHandler](#) is set. It opens a dialog window in the [client](#), in which the user must decide on the path for the process to follow. Choices for this include the unique technical names of the following transitions, or, if these are not filled, the names of the following [nodes](#).

If a transition leads to the end of a process, the unique technical name “{terminating_transition}” can be added. This addition ensures that upon choosing this transition, an additional query appears to confirm that the process should really be terminated.

The order in which the selection options appear in the pop-up are chosen in accordance with order in which the transitions were pulled from the gateway.

This means that the first transitions to be pulled from the gateway also show up in the selection list first.

In iGrafx, the unique technical name is found under XOR→TIM Properties→Outputs→ID!

Action Class

Event Type

any

Action Name

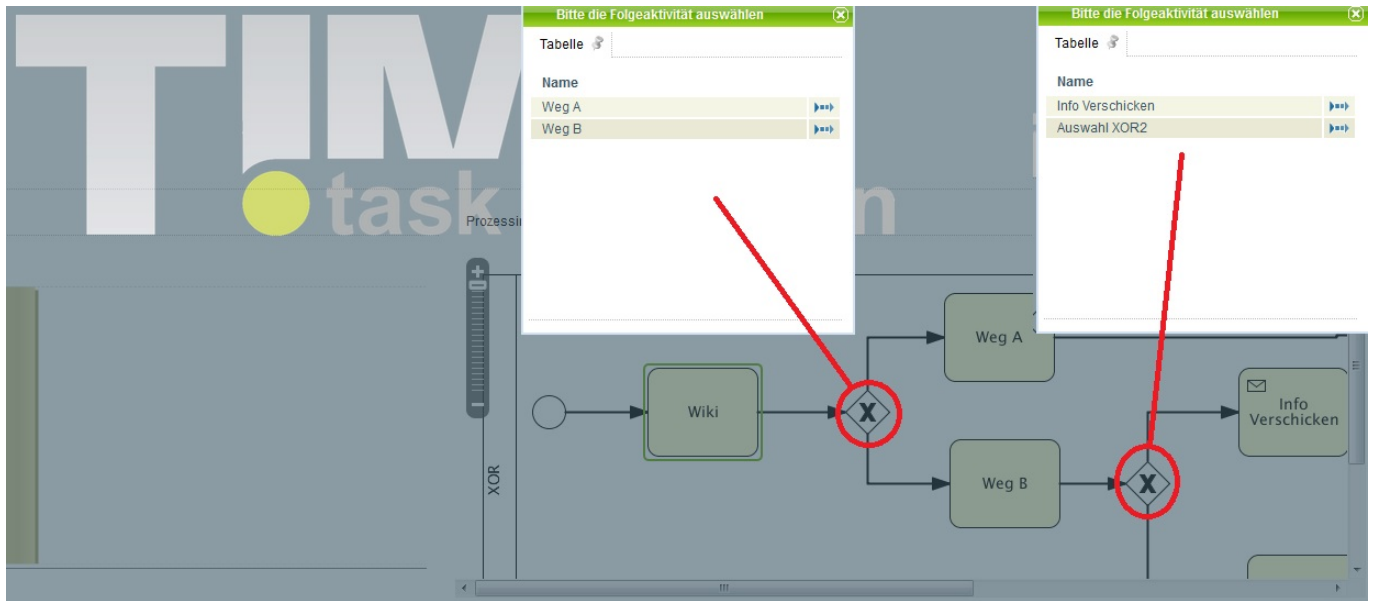

any

Mandatory Fields

none

Parameter
