InheritProcessVariableHandler

Description

This [handler](#) transfers variables from the main process to the sub-process. This means that the variables do not need to be defined/passed to the process state node one-by-one during the modeling process.

The [handler](#) is built onto the first node in the sub-process.

Action Class

```
com.dooris.bpm.actionhandler.InheritProcessVariableHandler
```

Event Type

node-enter

Action Name

any

Mandatory Fields

-

Parameter
