

# RenameInstanceHandler

This [handler](#) renames the current instance by any text that can include variables.

---

## Action Class

```
com.dooris.bpm.actionhandler.RenameInstanceHandler
```

---

## Event Type

any type

## Action Name

any name

## Mandatory Fields

-

## Parameter

```
instanceName = desired_name_${variable}
```

Variables are specified as `${variablename}` (see [Example](#))

## A continuous ID for process instances

The [system variable](#) `${SYS.BUSINESS_ID}` generates a unique, continuous ID for every created process instance. The system variable can be used in the `renameInstanceHandler`. Thus, every created process instance is given a unique, continuous ID.
