SGO_writeReport2SmartForm

Description

Generic class, which is used on a node with the event type **Node leave**.The corresponding processor is determined through the task and given in the format LastName, FirstName (SGI). A name for the variable (mostly department or responsibility) has to be given here.
A second parameter can optionally determine, that instead of the processor the **assignee** of the first task is registered. If no task has an assignee, than current user is returned.

class

```
com.dooris.bpm.saintgobain.SGO_writeReport2SmartForm
```

Event Type

Node Leave
