Description

The handler checks whether there are additional softlink instances or not. And if no parameter is passed on, it is checked whether all other softlink instances are terminated.
If the parameter softLinkState was passed, it is checked whether all other softlink instances are of a special node.
If all other instances will fulfill the requirements, it tries to send the main process further.

Action Class

```
com.dooris.bpm.actionhandler.SignalMainProcessBySoftlinkStateHandler
```

Event Type

any type

Action Name

any name

Mandatory Fields

-

---

softLinkState

Describes the node names on which all other instances must be located to allow and forward them to the main process.
