VariableAssignmentActionHandler

Description

This handler signals an activity in order to "cancel" the task.

Action Class

```
com.dooris.bpm.actionhandler.SignalProcessInstanceByNodeName
```

Event Type

any

Action Name

any

Mandatory Fields

none -

Parameter

nodeName = Name of the node that should be signaled

Explanation (see example)

variableToSet = id_of_variable

If the signaling was done successfully it is possible to set a variable. This parameter defines the name of the Variable.

variableToSetValue = value of the variable

This parameter defines the values of the variable.

Example
