TrackProcessHandler

In essence, this handler is an expansion of the [ProcessVariableSetter](#).

It sets a new variable and fills it with the values passed to it.

Additionally, a delimiter may be passed.

If a delimiter is given and the variable being written already exists, the variable will be filled as follows:

previous content + Delimiter + new content

Additionally, the following name spaces may be used:

`${CURRENT_USER_NAMEFIRST}` ⇒ First name of the current user

`${CURRENT_USER_NAMELAST}` ⇒ Last name of the current user

`${CURRENT_TIME}` ⇒ Current time in the format: HH:mm (i.e.: 12:15)

`${CURRENT_TASK}` ⇒ Name of the current [Activity](#)
