VariableExistsDecisionHandler

Description

This decides which path should be taken at a “fork in the road” based on if a variable is present (filled). For this, one possible transition must be designated as **false** (not available, empty), and the other designated as **true** (available, filled).
This handler is placed directly on an XOR-decision.

Action Class

```
com.dooris.bpm.actionhandler.VariableExistsDecisionHandler
```

Event Type

any

Action Name

any

Mandatory Fields

-

variable

Here, the name of the variable used to determine the correct path is entered.
