

WaitForSoftLinkedSubprocessesHandler

Description

This handler can be used in two different ways.

- As an event on a node it prevents progressing the process / finishing a task if a process, which was started via Softlink, is not finished yet.
- As a decision handler on a XOR gateway it can determine if a Softlink process is finished or not. For that on way has to contain the name **running**, this is the way that will be gone, if the process is not finished. The other way gets the name **finished**, this is the way, which will be gone, if the softlink process is finished.

class

```
com.dooris.bpm.actionhandler.WaitForSoftLinkedSubprocessesHandler
```

Event Type

any

Action Name

any

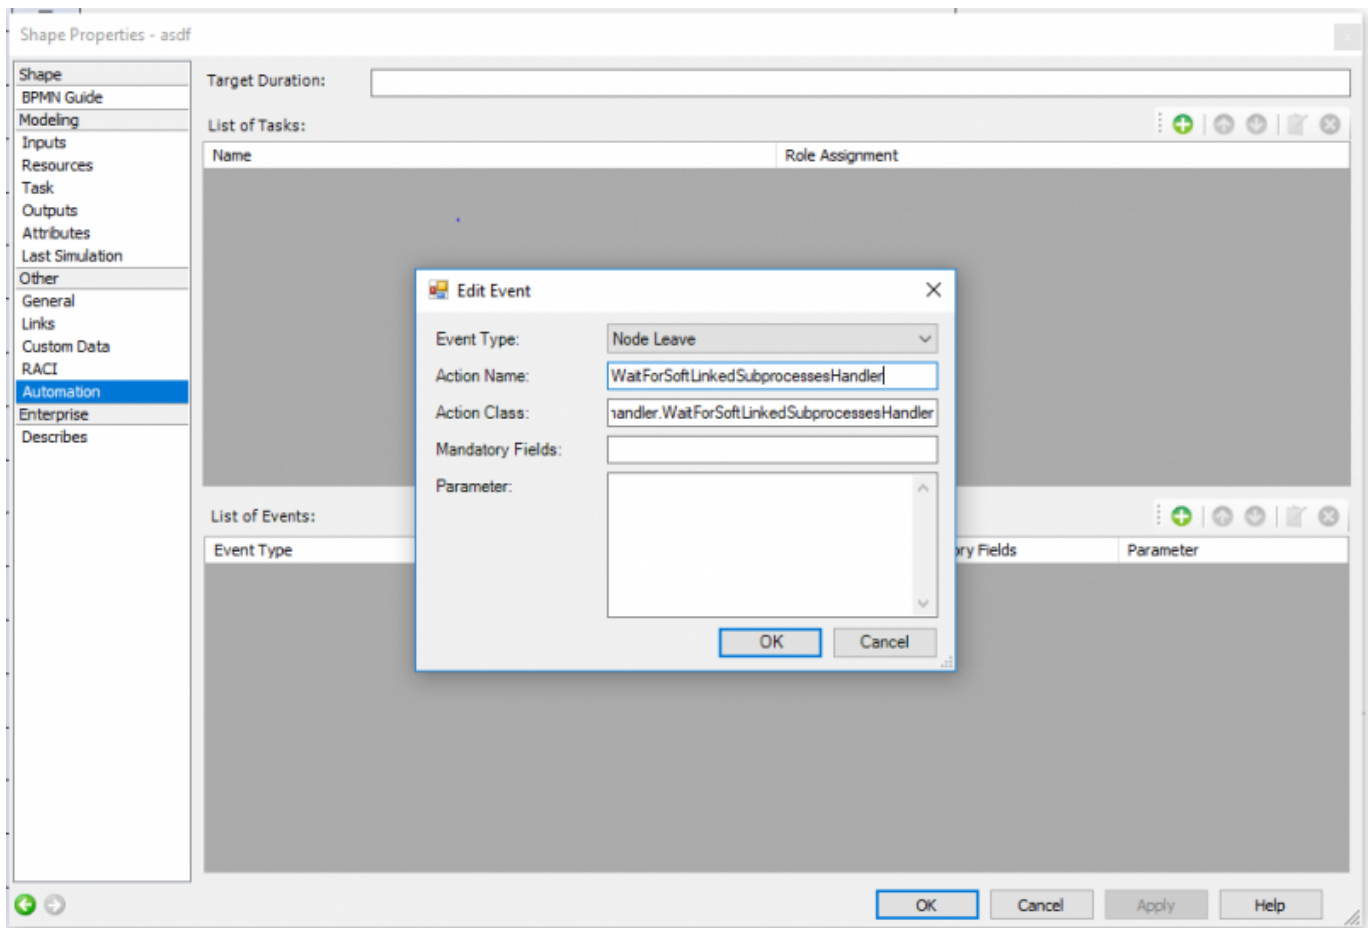

Mandatory Fields

-

Parameter

-

Example as Actionhandler

Example as DecisionHandler
