

WriteLastTaskFinisherInVariableHandler

Description

The WriteLastTaskFinisherInVariableHandler saves user information (i.e. email, id, name, and firstname) of the user that completed a task to process variables.

Handler Class

```
com.dooris.bpm.actionhandler.WriteLastTaskFinisherInVariableHandler
```

Event Type

node-leave

Action Name

any

Mandatory Fields

empty

Parameter

lastFinisherVariable

Name of the variable that will contain the captured user information.

userAttribute (optional)

Here you can define which user information will be captured in the process variable. The available values are **Email**, **ID**, **Name**, **firstname**, and **lastname**. To capture multiple values (e.g. email, first and lastname), the values have to be comma-separated within the **userAttribute** parameter.

In version 5.5 the values **Vorname** and **Nachname** have been replaced by **firstname** and **lastname**. The old values will still work in existing processes, but are deprecated.

Example

1. Example

lastFinisherVariable=mail_user
userAttribute=Email

Created process variable
mail_user=Hans.Muster@firma.de

2. Example

lastFinisherVariable=mail_user
userAttribute=Email,ID

Created process variables:
mail_user_Email=Hans.Muster@firma.de
mail_user_ID=543

3. Example

lastFinisherVariable=mail_user
userAttribute=Email,Name,firstname,lastname

Created process variables:
mail_user_Email=Hans.Muster@firma.de
mail_user_Name=Hans.Muster
mail_user_firstname=Hans
mail_user_lastname=Muster
