

Purpose of the component

Often a decision in TIM is made by many different departments or users. If one of them declines, it does not matter how the others decide and it is declined.

Which activities and gateways do I need in a process?

Activities and gateways that are needed for implementation:

- XOR (amount depending on different users)
-

Which actionhandlers do I need?

Actionhandler that are needed for implementation:

- [VariableDecisionHandler](#)
-

Smartform

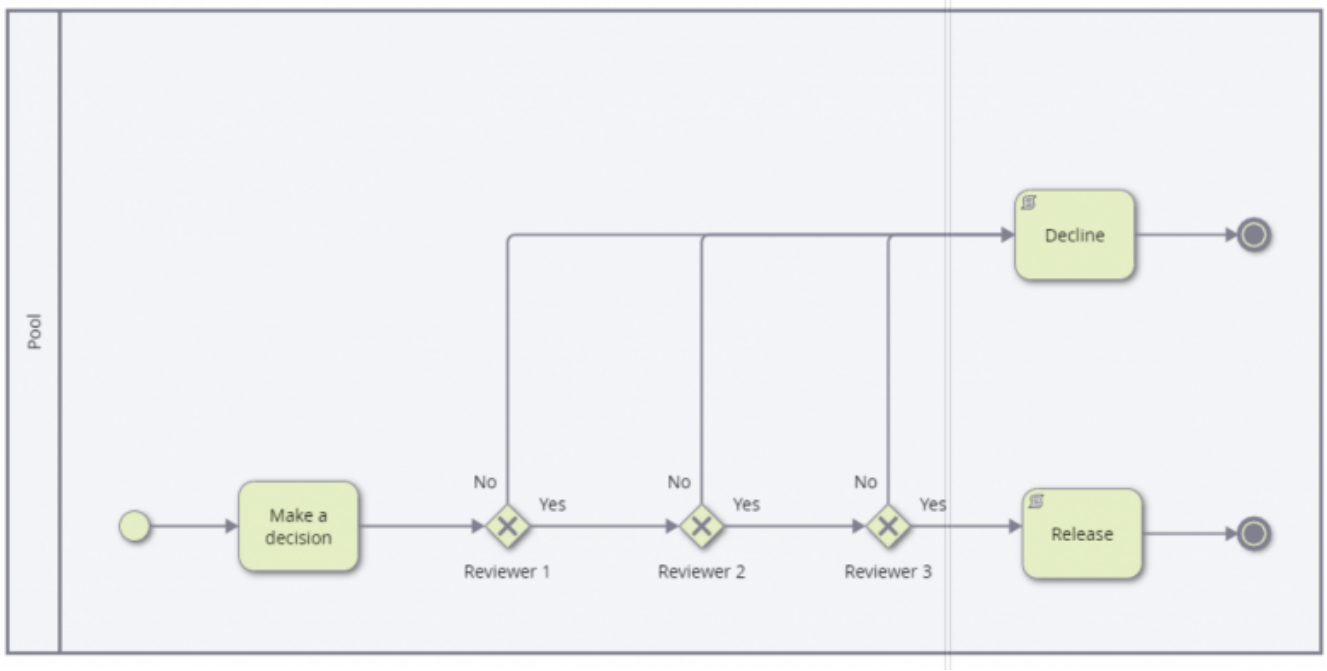

We need the option to release or decline for all 3 reviewer in the smartform.

```
<form>
Reviewer 1 <input type="radio" name="reviewer_one" id="reviewer_one_yes"
value="yes"/> Yes <input type="radio" name="reviewer_one"
id="reviewer_one_no" value="no"/> No

Reviewer 2 <input type="radio" name="reviewer_two" id="reviewer_two_yes"
value="yes"/> Yes <input type="radio" name="reviewer_two"
id="reviewer_two_no" value="no"/> No

Reviewer 3 <input type="radio" name="reviewer_three" id="reviewer_three_yes"
value="yes"/> Ja <input type="radio" name="reviewer_three"
id="reviewer_three_no" value="no"/> No
</form>
```

Integration

XOR´s

On the XOR gateway a VariableDecisionHandler is to be set, which accesses the releasevariable in the smartform.
