Explanation
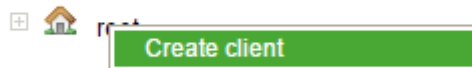

In T!M, the customer can create so-called clients. Clients can represent various customers, subcontractors, or a test-system.

Creation of Clients

Only one system user will have the ability to create new clients. This user will be unlocked and delivered as soon as T!M has been purchased.

> How to register with the user is explained [here](#)

As soon as a user is registered, right-clicking on **root** and then selecting the button "Create client" will open a window, in which the desired client name can be entered. The system then creates the clients with the standard users, after which the new clients can be logged into.
