

## Adapt context roles

Via the administration client, context roles can be added and adapted. Context roles fulfill the task of allotting a separate [role](#) to a certain user within a process.

If a context role is adapted, the following window opens:

Context-role

Properties

Search results

User

Element	Description
1	Here, the user for which the role is created, is picked. A click on the dropdown will open it and all users arranged will be displayed. The one required can now be chosen.
2	This dropdown serves for the selection of which of the above mentioned roles the user should play.
3	Here, the context name is chosen, that is in which frame the context role is located.
4	Here, the context-ID, which specifically indicates which definition/instance is designated for this role, is displayed. This field can not be adapted directly but is filled via the search (Element 5). See <a href="#">search</a>

## Search

In order to allot a precise merit to a context role, the search has to be used. For this, something has to be entered into the search field.

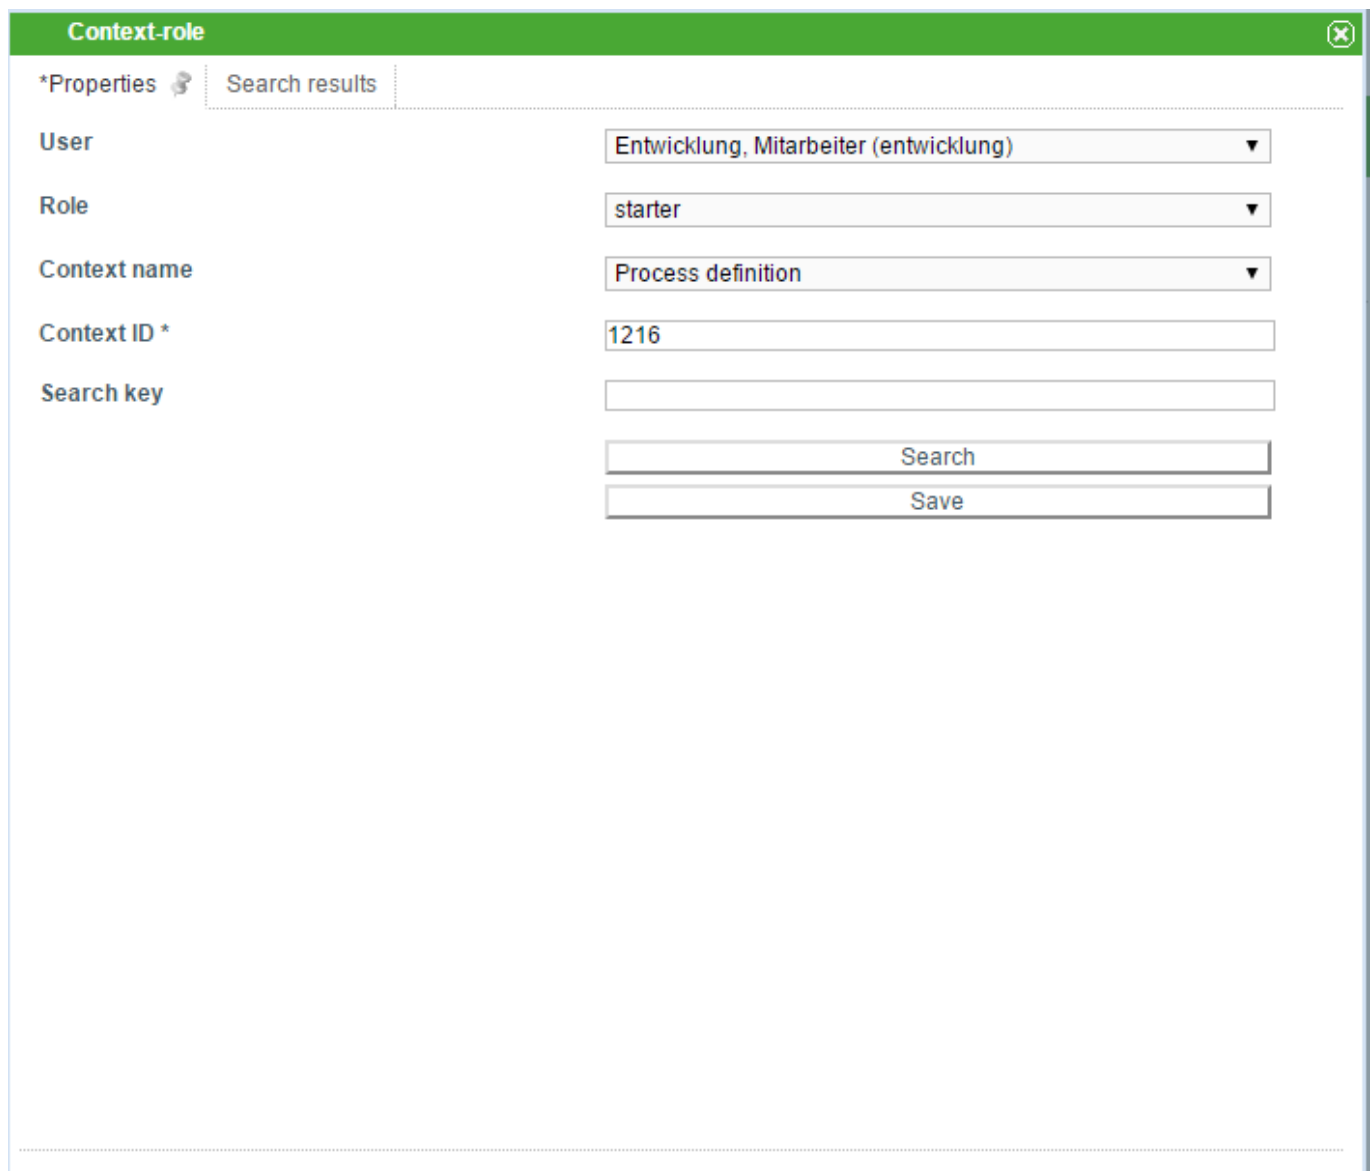

If process definition is chosen in the context name, then the name of the wanted process definition has to be entered in the search field.

If process instance is chosen, the name of the process instance for which the role is to be valid has to be entered in the search field.

The same counts for process-definition templates.

It is also possible to start the search without making an entry. A list of all possible results will then be released.

After a successful search the tab **"Search result"** will open.

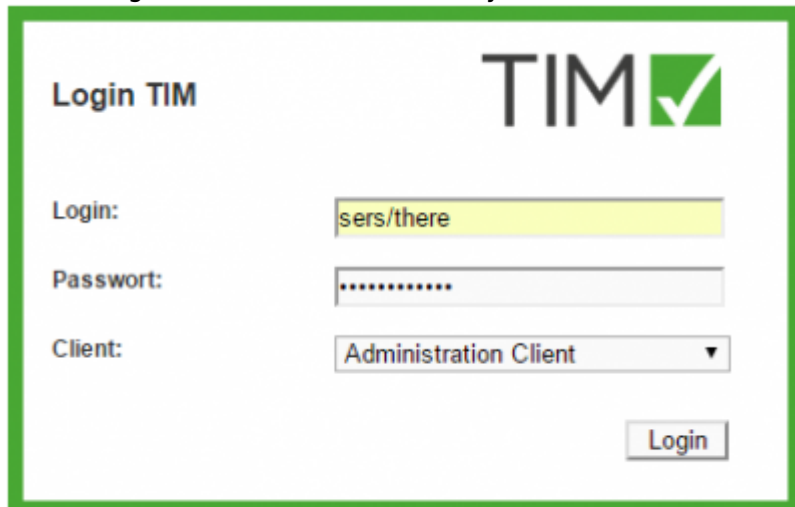

The screenshot shows a dialog box titled "Context-role" with a green header bar. Inside, there are two tabs: "\*Properties" and "Search results". The "Search results" tab is active. It contains several input fields and buttons:

- User:** A dropdown menu with the selected value "Entwicklung, Mitarbeiter (entwicklung)".
- Role:** A dropdown menu with the selected value "starter".
- Context name:** A dropdown menu with the selected value "Process definition".
- Context ID \*:** A text input field containing the value "1216".
- Search key:** An empty text input field.
- Buttons:** Two buttons at the bottom, "Search" and "Save", each in its own rectangular box.

In this list the different instances which correspond with the search will appear. A click on an element of the list will get you to the tab **"Properties"** and the ID of the corresponding selection is noted in the context-ID field (Element 4).

## Follow context roles

Please register in [Admin Client](#) with your admin user.

The image shows a login form for the TIM system. It has a title 'Login TIM' and a logo 'TIM' with a green checkmark. There are three input fields: 'Login:' with the text 'sers/there', 'Passwort:' with masked characters, and 'Client:' with a dropdown menu showing 'Administration Client'. A 'Login' button is at the bottom right.

Login TIM

Login: sers/there

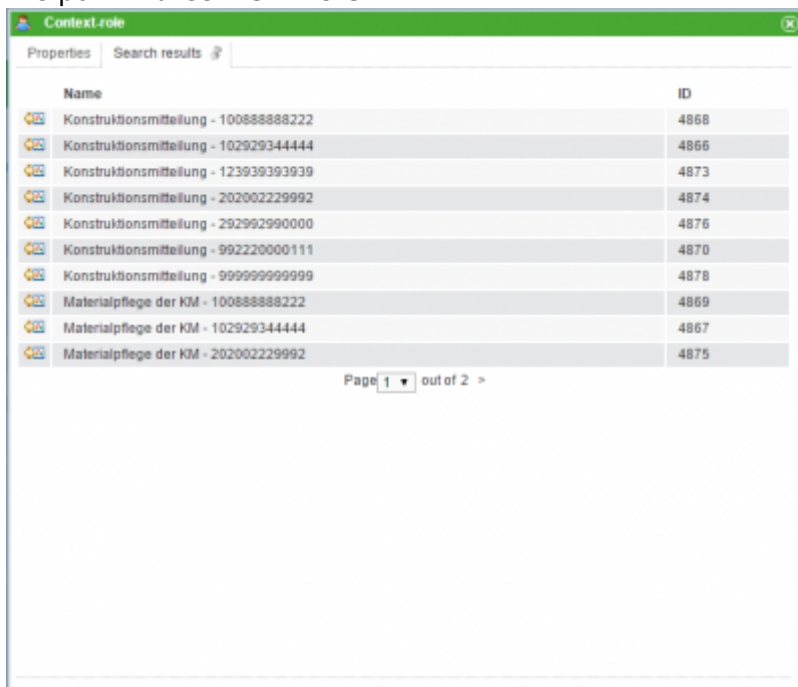

Passwort: .....

Client: Administration Client

Login

TIM Solutions GmbH TIM v5.1

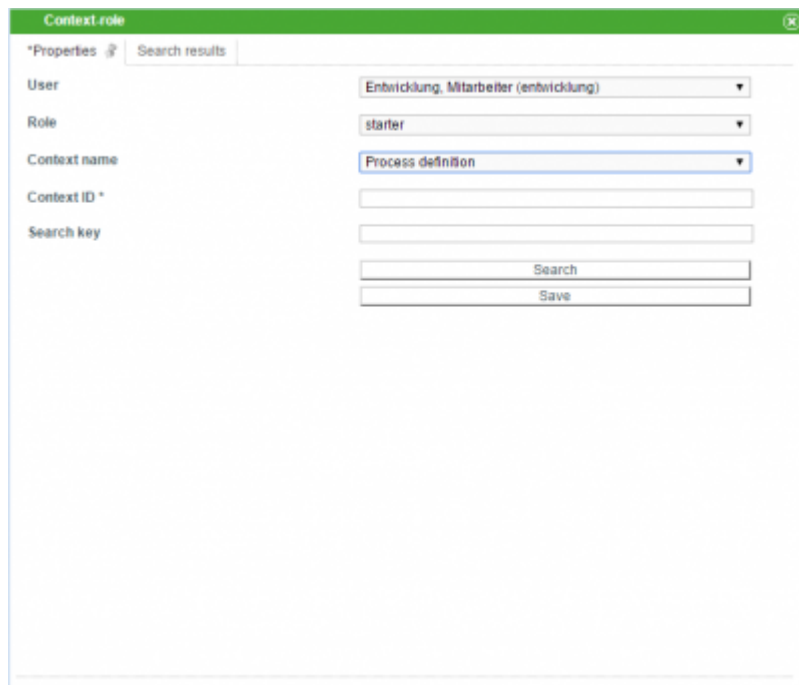

Choose the point **User** in the tab **Administration** and to a right click on the regarding user. Choose the point **Ad context role**.

The image shows a screenshot of a 'Context role' window. It has a 'Properties' tab and a 'Search results' section. Below is a table with two columns: 'Name' and 'ID'. The table lists several roles, including 'Konstruktionsmitteilung' and 'Materialpflege der KM'. The page number '1' is shown at the bottom.

Name	ID
Konstruktionsmitteilung - 100888888222	4868
Konstruktionsmitteilung - 102929344444	4866
Konstruktionsmitteilung - 123939393939	4873
Konstruktionsmitteilung - 202002229992	4874
Konstruktionsmitteilung - 292992990000	4876
Konstruktionsmitteilung - 992220000111	4870
Konstruktionsmitteilung - 999999999999	4878
Materialpflege der KM - 100888888222	4869
Materialpflege der KM - 102929344444	4867
Materialpflege der KM - 202002229992	4875

Page 1 out of 2

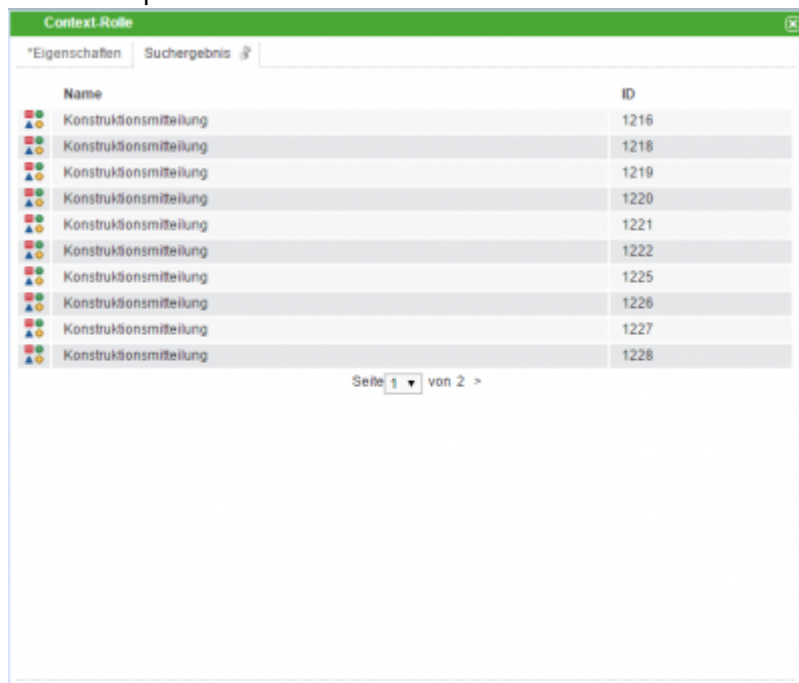

In the popup **Context role** you choose a role (preferably starter).

The screenshot shows a dialog box titled "Context role". It has two tabs: "Properties" (selected) and "Search results". Under "Properties", there are five fields: "User" (dropdown menu showing "Entwicklung, Mitarbeiter (entwicklung)"), "Role" (dropdown menu showing "starter"), "Context name" (dropdown menu showing "Process definition" and highlighted with a blue border), "Context ID" (text input field), and "Search key" (text input field). Below these fields are two buttons: "Search" and "Save".

For the context name you choose process definition.  
In the field search term you type the beginning of the corresponding process definition and click on the button search.

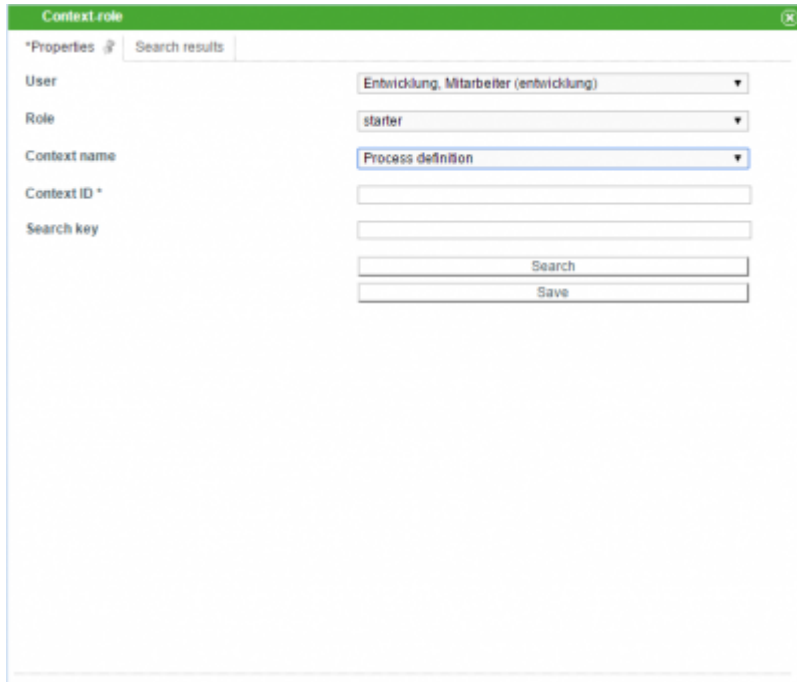

In the following popup the columns can be newly arranged via a click on ID. The top entry matches the latest process definition.

The screenshot shows a dialog box titled "Context-Rolle". It has two tabs: "Eigenschaften" (selected) and "Suchergebnis". Under "Suchergebnis", there is a table with two columns: "Name" and "ID". The table contains 9 rows, all with "Konstruktionsmitteilung" in the "Name" column and IDs ranging from 1216 to 1228. The table is sorted by ID in descending order. Below the table is a pagination bar showing "Seite 1 von 2".

Name	ID
Konstruktionsmitteilung	1216
Konstruktionsmitteilung	1218
Konstruktionsmitteilung	1219
Konstruktionsmitteilung	1220
Konstruktionsmitteilung	1221
Konstruktionsmitteilung	1222
Konstruktionsmitteilung	1225
Konstruktionsmitteilung	1226
Konstruktionsmitteilung	1227
Konstruktionsmitteilung	1228

Choose the row with the highest ID of your definition via a click.

Via a final click on the button save you have updated the corresponding context role.
