

Introduction

TIM is a Java-based application that runs (at the moment exclusively) in JBoss and requires a database as storage medium.

All necessary documents can be downloaded from our server: <http://download.tim-solutions.de>
This document is only applicable for Windows installations; however, they may also be used for Linux systems if the proper technical knowledge is present

Hardware Requirements

The most up-to-date [requirements](#) are found on this page.

An Overview of the First Steps

1. [Installation of Java JDK](#)
2. [Installation and configuration of MySQL as a data base](#)
3. [Installation and configuration of JBoss](#)

Step 2 must be finished before continuing the process.

4. [Installation and configuration of TIM](#)
 - 4.1 [Encryption of TIM](#)
-

Optional Components

5. [Installation of the Dashboard](#)

The Dashboard can be used by a process manager to conduct analyses of crucial data.
