Creating a link to a process instance

It is possible to create a link that directly refers to a process instance. This is similar to creating links that automatically direct the user to tasks in task mails.

```
${baseLink}client/todo/index.htm?ProcessInstance=${processInstanceId}
```

For example, this link may then be used in [e-mails](#) or [reminders](#).

Attention: This function will only be available starting from TIM v4.0 and onwards!
