## Process definition

A process definition entails for the entire process run the process model including the fundamental logic of the workflow. Process definitions are the first tier within the ordering of all elements. The process definition defines the general procedures of a process. There are not yet any values available at this stage. A process definition is comprised of several activities which are supposed to be done within a certain order. Each activity itself is comprised of at least one single task which has to be done by an employee.

**Instanzen** werden ausgehend von diesen Prozessdefinition gestartet und verlaufen nach dem Prozessmodell der Definition.
