

# createProcessInstancesByHandler

## Description

The timer gets all \*.csv files from a folder passed to it and creates for each CSV a new table in the database.

The tables are named as follows: "custom\_FILENAME".

The first row of the CSV determines the number and names of the columns, all other rows fill these columns.

If the number of columns from a row do not correspond to the number of columns of the table, it will filled with "zero" until the number is correct.

## Timer Name

any name

## Webservice Name

```
ProcessInstanceManager
```

## Webservice Methode

```
createProcessInstancesByHandler
```

## Parameter

### Parameter

Path to the folder where the CSV files are located!

```
com.dooris.bpm.actionhandler.CreateAndFillDbByCsvInputHandler, FILEPATH
```

## Example

**Properties**

\*Properties

Timer Name	<input type="text" value="createAndFillByCsvImport"/>
Webservice Name	<input type="text" value="ProcessInstanceManager"/>
Webservice Methode	<input type="text" value="createProcessInstancesByHandler"/>
Parameter	<input type="text" value="bpm.actionhandler.CreateAndFillDbByCsvInputHandler,C:\Files\"/>
Acting User	<input type="text" value="Doe, John (john.doe)"/>
Starting time	<input type="text" value="25.11.2014 10:15"/>
Time to start	<input type="text" value="30s"/>
Intervall	<input type="text" value="15m"/>
Max. Recursion	<input type="text" value="-1"/>
Act. Recursion	<input type="text" value="11519"/>
Status	<input type="text"/>
Last Execution	<input type="text" value="03.12.2014 10:24"/>
