

createProcessInstanceByCSVHandler

Description

This handler reads all of the files in a folder, starts a process instance for every CSV-file, and names it after the file. The file is then attached to the process.

Timer Name

any

Web service Name

ProcessInstanceManager

Web service Method

createProcessInstancesByHandler

Parameter

Process definition

Name of the process definition to-be started.

File path

Path to the folder from which the file is to be read.

Name of the process instance

The name is taken from the columns of the CSV file. For example, if 1~2 is given with the parameter, the resulting name will be Spalte1Spalte2.

Limit

Here, a maximum for the number of runs that a timer undergoes may be set for the instance.

Caution! The file will not be moved.

Example

Timer Name:

TimerForCreateProcessInstancebyCSVHandler

Webservice Name:

ProcessInstanceManager

Webservice Method:

createProcessInstancesByHandler

Parameter:

Handler,Parameter1;Parameter2;Parameter3

com.dooris.bpm.beans.impl.CreateProcessInstancebyCSVHandler,/usr/local/tim/jboss/server/default/deploy/loom.ear/loom-portal.war/custom/markus/Markus.csv;InstanceCreationHandlerTestprozess;0~1
