

setProcessVariableAndSignalProcessInstanceByTransitionName

This timer writes a process variable and forwards an instance based on the activity name and transition name.

IMPORTANT! This is mostly used in combination with the [decision by e-mail](#). In this case, the Webservice to be executed as SOAP-call. Using this as a completely configured timer in the admin client makes little sense.

Webservice Name

ProcessInstanceManager

Webservice Method

setProcessVariableAndSignalProcessInstanceByTransitionName

Parameter

Parameter 1

ProcessInstancelid

Link call up: args[0] (see [Example](#))

Parameter 2

Variables name

Link call up: args[1] (see [Example](#))

Parameter 3

Variables value

Link call up: args[2] (see [Example](#))

Parameter 4

Activity name

Link call up: args[3] (see [[#Example]])

Parameter 5

Transition name

Link call up: args[4] (see [[#Example]])

Only for link call up

uid: Encoding login data for TIM Base64 (client/user:password)

Example

```
http://URL of the Server/loom-portal/ProcessInstanceManager/setProcessVariableAndSignalProcessInstanceByTransitionName.soap?args[0]={processInstanceId}&args[1]=VARIABLESNAME&args[2]=VARIABLESVALUE&args[3]=ACTIVITYNAME&args[4]=TRANSITIONNAME&i=1&uid=LOGINDATA
```
