

Use of WordTemplateHandler

Under [WordTemplateHandler](#) you can find mor information about using this handler.

Processing booleans

When a processvariable has “bool” as a prefix, the WordtemplateHandler tries to change the value into Yes/No.

Variable	Value	Result in the Template
sbahilft	true	true
boolsbahilft	true	Ja

Variables are not shown

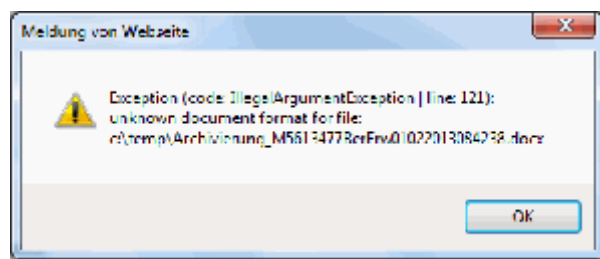

If avariable is on a page break, it will not be shown in the PDF. The variable then has to be shortened (or relocated), so that it is not on a page break anymore.

Unknown Format

In [Version 3.4.6](#) an error message can appear when creating a PDF:

Caused by: java.lang.IllegalArgumentException: unknown document format for file: /Users/Martin/dev/tmp/Reisekosten_Kinzlmaier_Jakob.docx

solution:

server/default/lib/jodconvert-2.2.1

delete and replace with version jodconverter-2.2.2. You can download this under [hier](#).

restart Server
