

Installation of Java JDK

The installation of Java JDK can easily be accomplished using the wizard. If in the course of the installation the path of directory has to be changed, a second intermediate step is necessary (please refer to the corresponding screenshot!). However, in such a case default settings could still be used.

Some applications require that environment variables be set correctly (please change accordingly the directory path of your Java JDK entry!):

To correctly set user variables: JAVA_HOME C:\Programs\Java\jdkVERSION

To expand systemic variables: Path <formerPath>;C:\Programs\Java\jdkVERSION\bin
