

## Version und Packet

Before TIM can be installed, the [instructions on this page](#) must be followed!

The most recent version and the corresponding changelog can be found [here](#). To request a download link, please contact [support@tim-solutions.de](mailto:support@tim-solutions.de) or go to [download.tim-solutions.de](https://download.tim-solutions.de)

The TIM application is always delivered in EAR-format and must be copied into the directory

```
C:\tim\jboss<version>\standalone\deployments\
```

## Configuring the Databank Connection

In order to allow TIM to use the [equipped databank](#), The

```
standalone.xml
```

file must be configured. Further information can be found on [this page](#).

## Initializing TIM

After configuring the databank connection, the service must be started or re-started. After this, the user should arrive at the following address:

<http://computername:8080/loom-portal/>

The appearance of the log-in screen indicates that the installation and configuration were successful, and the databank with initial values is present, as filled by an administrator. This occurs through the following script:

<http://computername:8080/loom-portal/init/InitDB>

**CAUTION!** The Init-Script must be executed once in order to be able to log-in!

## Additional Basic Installation

This area is relevant to businesses, which do not have the rights to **CREATE** or **ALTER** the databank

Should the company require scripts in order to initially generate and fill the data bank, these may be taken from the following page:

<http://download.tim-solutions.de/listing.php?repname=Download&path=%2FInstallation%2FDB-Scripts%2F>

---

## After Initializing?

1. [How does one log-in](#)
2. [How is a mandator created](#)
3. [Which settings are available and necessary in tim.properties](#)
4. [What can be set in the client profile and how](#)
